

IMPLANT RETAINED REMOVABLE DENTURES

Loose, Painful or Ill-Fitting Dentures Affect Quality of Life

Patients with loose or ill-fitting dentures often experience pain, as well as difficulty with speech and chewing food. What begins as an inconvenience can affect overall health and quality of life over time.

These problems require the denture wearer to utilize the lip, tongue and cheek muscles to hold traditional dentures in place, which aggravates the feelings of discomfort and some will go so far as to compromise their diet in order to avoid pain or embarrassing mishaps.

You Deserve the Comfort and Freedom to Function Normally

Implant-Retained Removable Dentures are a type of overdenture supported by and attached to implants for a secure, stable fit. Made from tooth materials that are stronger and more aesthetically pleasing, Implant-Retained Removable Dentures eliminate many of the problems associated with ill-fitting traditional dentures, providing patients with the comfort and freedom to function normally in society, smile with confidence and eat what they want, instead of only what they are able.

Next Steps

- Dr. Christian will coordinate your case with our trusted and preferred oral surgeon care provider.
- Dr. Christian will design and create your dentures.
- The timeframe and sequence of your care is driven by your unique needs.

We choose specialists based on skill, but our priority is to you, and your experience is important to us. We'll follow your care through the oral surgery process very closely, and if you have any concerns along the way, we want to be aware.
