

LOCATORS

IMPLANT RETAINED REMOVABLE DENTURES

A **Complete Denture with Locator (snaps) Attachments** is an appliance that replaces all of the teeth in one jaw, upper or lower. You, the patient, have the convenience of placing it and removing it, even though it is "snapped" securely in place. Any number of snaps can be used, but the minimum number is two.

Learn more about Implant Retained Removable Dentures (Locators) in the Patient Education Library on our website.
